

This half term we have been...

- **Creating our own science experiments**

For science week, we had lots of our own experiments in the nursery. The children explored using magnets, creating their own electric circuits and making explosions with colour. Using clay, the children built a volcano. We poured in water, washing up liquid and red food colouring, we then mixed in bicarbonate of soda and poured in the vinegar and watched our volcano erupt!

- **Looking after our garden**

The children have shown a big interest in helping in the garden. They helped to dig over the vegetable patches, preparing them for planting after Easter. The children have been noticing the lovely flowers that have been growing. We have been talking about helping the flowers to grow and not picking them so we can all look at them.

The children have also been interested in the creatures we find in our garden. We have been finding them homes and collecting leaves for them to eat.
